Department of Computer Engineering, University of Jaffna, Sri Lanka

## ABOUT ME

Final year Computer Engineering undergraduate with hands-on experience in AI, Machine Learning, Software Development, and Web Development. Skilled in bridging technical theory with practical implementation by building functional, data-driven applications. Eager to contribute to innovative projects within a collaborative team while continuing to expand my engineering expertise.

## EXPERIENCE

### • Amplaz (Pvt) Ltd

November 2025 - May 2026

Software Engineering Intern

Sri Lanka

#### Tagoora Wallet

- Contributed to the development of a supplier-facing mobile wallet application using **Flutter**, implementing real-time balance visibility and transaction workflows for seamless financial operations.
- Worked on frontend integration of backend services using **GraphQL APIs**, enabling secure payout requests and account management features through efficient data fetching and state handling in the mobile application.

#### Tagoora Support Portal

- Collaborated on developing an internal support portal for dispute resolution and financial settlements using **React**, improving operational efficiency for support teams.
- Worked on **GraphQL** backend workflows and contributed to integrating **Algolia** for high performance, free text search across marketplace entities and transaction records.
- Gained experience in designing and implementing **AWS CDK** managed infrastructure, utilizing **AWS SQS based Daemon Processors** for asynchronous background workflows alongside S3 and DynamoDB to support system automation.

#### Tagoora Bookings

- Collaborated on building buyer facing booking interfaces and order management modules using **React**, enhancing the end-user booking experience through responsive and user-friendly UI implementations.
- Contributed to backend workflow implementations using **GraphQL**, supporting booking operations and order lifecycle management across distributed services.

## EDUCATION

### • University of Jaffna

2022 - Present

BSc.(Hons) in Computer Engineering

Jaffna, Sri Lanka

- Current CGPA: 3.70

- Dean's list in 2 out of 7 semesters

### • A / Central College

October 2020

GCE Advanced Level Examination – Physical Science Stream

Anuradhapura, Sri Lanka

- Z-score: 1.4558

- Combined Mathematics – A/ Chemistry – B/ Physics – C/ General English - A

### • A / Central College

2017

GCE Ordinary Level Examination

Anuradhapura, Sri Lanka

- Result: 9 A's

## PROJECTS

### • Sign Language Presentation Generation

Research Project

Tools: Python, PyTorch, Hugging Face, Transformers, NLP, Text Preprocessing

Ongoing

- Developed a Sinhala-to-Sign Language Presentation Generation system using Neural Machine Translation (NMT) and Transformer-based deep learning techniques to improve accessibility for the hearing-impaired community. The system processes Sinhala text input through preprocessing and tokenization pipelines, translates the text into Sri Lankan Sign Language (SSL) gloss representations using a Transformer-based sequence-to-sequence model, and generates continuous sign language presentations by mapping gloss outputs to annotated SSL gesture videos.

### • Favolosa - Jewellery E-commerce Platform

Semester 07 Project

Tools: React, Node.js, Express.js, MongoDB, Mongoose, Stripe, Cloudflare R2, Clerk

- Developed a full-stack jewellery e-commerce platform using React, for frontend development and state management, with Node.js and Express.js powering the backend APIs. MongoDB and Mongoose were used for database management, while Clerk handled user authentication and Cloudflare R2 was integrated for cloud-based media storage. The platform includes product management, category-based browsing, and cart and wishlist functionalities within a scalable frontend-backend architecture.

### • Mobius - E-commerce Platform

Personal Project

Tools: React, Node.js, Express.js, MongoDB, Mongoose, Cloudflare R2, Clerk

- Developed a full-stack e-commerce web application using the MERN stack, with a React.js frontend and a Node.js/Express.js backend connected to MongoDB using Mongoose. Implemented dynamic product management, shopping cart functionality, and user authentication using Clerk and JWT. Integrated cloud-based image storage with Cloudflare R2 and state management using Redux Toolkit and RTK Query for efficient API handling and asynchronous data flow.

### • HealthHub - Smart Hospital Management System

Semester 06 Project

Tools: React js, Spring Boot, MySQL, JavaScript, CSS

- Developed a full-stack Hospital Management System, designed to streamline healthcare operations through a role-based digital platform. The system was built using React.js for a modular and responsive frontend, Spring Boot for developing scalable RESTful backend APIs, and MySQL for managing a normalized relational database. It supports multiple user roles including Admin, Doctor, Patient, and Receptionist, each with dedicated dashboards and functionalities.

### • LinkUp - Real-Time Video Conferencing Application

Semester 06 Project

Tools: WebRTC, Socket.io, Node.js, Express.js, HTML, CSS, JavaScript

- Developed a real-time video conferencing web application using WebRTC for peer-to-peer audio and video communication, with Node.js and Express.js powering the backend and Socket.io enabling real-time signaling between users. The frontend is built with HTML, CSS, and JavaScript, delivering a lightweight interface that supports video calls, audio streaming, and text chat functionality. The system manages session coordination and media exchange through WebSocket-based communication.

### • Attendance Management System

Semester 05 Project

Tools: PHP, MariaDB, HTML, CSS

- A web-based Student Attendance Management System developed to demonstrate efficient database design and backend integration. Built using PHP, MySQL, and HTML/CSS, the project focuses on maintaining data integrity through a normalized relational database schema. The system streamlines the attendance tracking process by providing a centralized platform for managing student records, course data, and attendance entries.

## SKILLS

- **Languages:** Python, JavaScript, TypeScript, C, C++, Java, PHP, SQL, HTML, CSS
- **Web Technologies:** React, Node.js, Express.js, GraphQL, Flutter, Tailwind CSS, Shadcn, Socket.io, WebRTC
- **Cloud & Infrastructure:** AWS (CDK, AppSync, Cognito, SQS, S3, DynamoDB), Cloudflare R2
- **Databases:** MongoDB, MySQL, MariaDB, Vector Databases
- **AI & Machine Learning:** TensorFlow, Keras, Scikit-learn, Pandas, NumPy, Hugging Face Transformers, Matplotlib, Seaborn, LangChain, LangGraph, Neural Machine Translation (NMT)
- **Tools & Integration:** Stripe (Payments), Clerk (Authentication), Postman
- **DevOps & Version Control:** Git, GitHub, Docker
- **Specialized Area:** LLM , Agentic Workflows, NLP, Vector Databases, RAG
